Compost Marketing and Labeling Project
Figures 1-25

A survey of home gardeners (107) and businesses (47) conducted by the Cornell Waste Management Institute in 2000 with the goal to help insure that products made and sold meet user needs.

The Cornell Waste Management Institute, Woods End Research Lab, NYS Organic Recycling and Compost Council (committee of the NYS Association for Reduction, Reuse and Recycling), and the NYS Energy Research and Development Authority

Disclaimer: The survey respondents are compost users and not the general public since people were not interested in filling out the survey if they were unfamiliar with compost. The timing and limited funding did not allow for a statistically rigorous sampling protocol. However, valuable data were collected.
